

Inspection Form Specifications AV Ref # 657

About:

BPOS comes equipped with several different inspection forms, via both BPOS and ServiceCAT®. However, if you decide you need something more specific to your business, you can order one through our outside contractor by contacting Tech Support. Or you can have one designed by someone locally. If you choose to go local, you will need to provide your graphics designer with the following specifications.

Inspection Forms that print on a separate page with vehicle/workorder information:

.JPG Dimensions (Pixels):

Horizontal: 2412

Vertical : 3200

Resolution:

Horizontal: 300 dpi

Vertical : 300 dpi

The header area does have information that prints on it that is hard-coded and not editable. For your convenience, we provide a sample image with the required fields already included for you to provide to your graphics person. They can then see what is required, use it as a template and design around it. To access and download the sample image, click the link below:

[Inspection Form Template - Blank](#)

Inspection Forms that print on the back-side of the workorder:

Note:

- Your printer must have duplex-printing capability (to print 2-sided) that you or your hardware person will enable.
- These inspection forms will print with NO vehicle/workorder-specific information and, as such, have no restrictions on design other than total size.

.JPG Dimensions (Pixels):

Horizontal: 2412

Vertical : 3200

Resolution:

Horizontal: 300 dpi

Vertical : 300 dpi
